

Architecture technique du projet

Objectif

Décrire l'architecture logicielle de l'application de gestion de stock pour la cuisine d'un collège, incluant les technologies utilisées, les communications entre les composants, et le mode de déploiement.

Stack technique (versions LTS)

| Couche | Technologie principale | Version LTS |
|-----------------|---------------------------|-------------|
| Frontend Web | React.js | 18.x |
| Mobile | React Native | 0.74.x |
| Styles | Tailwind CSS | 3.x |
| Backend | Spring Boot | 3.2.x |
| Framework | Spring Framework | 6.x |
| Langage | Java | 21 (LTS) |
| Base de données | PostgreSQL ou MySQL | 16.x / 8.x |
| ORM | Spring Data JPA | 3.x |
| Déploiement | Docker + Railway / Render | - |

Architecture en couches

[UI (React / React Native)]

[API REST (Spring Boot)]

[Service métier (Java 21)]

[Repository JPA]

[PostgreSQL / MySQL]

Déploiement et environnement

| Environnement | Description |
|-----------------------|---|
| Local | Docker Compose avec PostgreSQL + Spring |
| Cloud | Railway, Render ou Heroku |
| CI/CD (option) | GitHub Actions pour build/test/deploy |

Conteneurisation

Un exemple simple de structure Dockerisée :

- frontend/ → App React
- backend/ → App Spring Boot
- docker-compose.yml :

```
services:
```

```
backend:
```

```
  build: ./backend
```

```
  ports:
```

```
    - "8080:8080"
```

```
  depends_on:
```

```
    - db
```

```
frontend:
```

```
  build: ./frontend
```

```
  ports:
```

```
    - "3000:3000"
```

```
db:
```

```
  image: postgres:16
```

```
  environment:
```

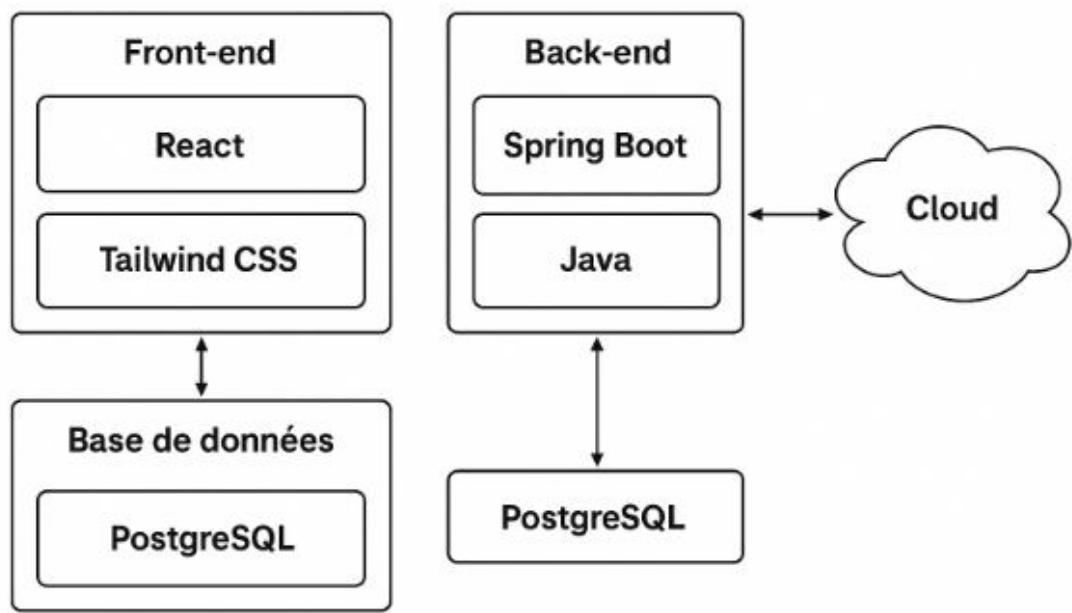

```
    POSTGRES_USER: user
```

```
    POSTGRES_PASSWORD: password
```

```
    POSTGRES_DB: stockcuisine
```

```
  ports:
```

```
    - "5432:5432"
```

Gestion de stock raingmde-grstoccction au collège
